# Pneumatic/Hydraulic Torque Device Calibration Indicator

The Pneumatic/Hydraulic Torque Device Calibration Indicator provides an independent reading from the Torque Device to ensure that the prescribed manufacturer recommended torque value has been properly met.

**Available for  
Torque Devices of  
16"-32"**

## Benefits

- Lightweight aluminum construction allows for device to be installed manually
- Rules out incorrectly torqued joint when evaluating electrode breakage
- Critical in recalibrating Torque Device when switching electrode manufacturers
